## Supplies Inventory Management Solutions

Designed to save you money

### Three Solutions Designed to Help Manage Your Inventory

Managing your custom label inventory can be a challenge; running out of labels can be expensive. Because requirements vary, Cal-Sierra has developed three different inventory management solutions. From the simplicity of a blanket order to the power of our Inventory Management Program, we have a solution to help your business save money and run more efficiently.

#### Blanket Order

A quick, simple way to make sure your custom labels are scheduled to ship. Provide a single purchase order for a six- or twelve-month supply and pre-schedule your shipping dates. Cal-Sierra will produce each release separately and ship on the requested date with no hassles or worries. With a blanket order, you get:

- Price protection
- Pre-scheduled shipments
- Low minimum requirements

#### Make-and-Hold

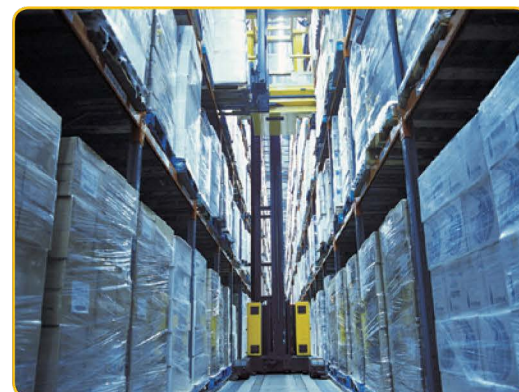

Not sure when you will need your labels? This program provides the flexibility to request shipments when you need them over a 90 to 180 day timeframe. Provide a single purchase order for the entire supply, then send in release requests as needed. Cal-Sierra will run the entire supply all at once and hold the labels in our climate controlled warehouse. Cal-Sierra Make and Hold gives you:

- Reduced label costs due to a larger run quantity
- Flexible shipment dates and quantities
- Renewable

#### Inventory Management Program

Our most powerful solution; Cal-Sierra manages your custom label inventory based on a mutually agreed upon forecast. Perfect for customers with multiple shipping locations that require labels at different times. Always in stock, same day or next business day shipments. Cal-Sierra's Inventory Management Program Provides:

- Annual agreement
- Same-day or next-day shipments
- Eliminates your inventory carrying costs

Four Locations in the United States
